

## Features and Benefits

- Compact and portable
- Provides clean, frayless cut lengths
- Bench-mount allows hands free for manipulation of sleeving

# BentleyHarris<sup>®</sup> Hot Knife Cutters

## For Cutting Expandable Sleeving

All braided products have some tendency to fray at the ends when they are handled during assembly operations. Commercially available hot blade devices are available for addressing this problem. Cut ends remain soft for a few seconds after hot cutting. Hot cut ends remain essentially frayless even after the ends are opened up to full expansion capability.

### Bench Mount

Many users of Bentley Harris Expando<sup>®</sup> sleeving products use a bench mount hot knife in order to produce clean, non-fraying cut lengths. The operator draws the sleeving down across the knife blade under tension and has both hands available to manipulate the sleeving.

### Hand-Held

The hand-held model is comprised of 3 parts: a handle, 45-watt heating element and copper cutting tips. This unit is portable and requires a standard electrical outlet. The hand-held model is perfect for jobs that require minimal cutting.

If you have any questions on technique or available equipment, please call Federal-Mogul Systems Protection Group, manufacturer of Bentley Harris protection products.

## Typical Applications

- Cutting Expando<sup>®</sup> Sleeving
